Course Catalogue for the Healthcare Sector
Course Compass and Career Guide for Doctors and Health Experts

- Key reference medium for continuing education in the health care sector¹
- 2,500 courses, programmes, summer schools and conferences
- Researched postgraduate programmes offered by 750 national and international organisers
- Expert opinions and scientific contributions

20 Years of „medicine & health“

The first edition of „medicine & health“ was released in 1989 – as a three-page leaflet. The idea behind it was the research for suitable preparatory courses for humanitarian foreign medical assignments. This was also the starting point for the education project of the same name. From a simple list of organisers it gradually developed into a full course calendar. Today „medicine & health“ is the most renowned compendium for postgraduate continuing education in the medical and health sector.

The anniversary issue, „medicine & health 2010“ is available as of now.

„Quality Leads the Way“

With this premise the editor Dr. Gerhard Polak and his team offer the best postgraduate learning opportunities in the medical and health sector.

Independent, objective research, as well as long-standing experience in the area of continuing education in healthcare form the basis of the high quality standard.

„medicine & health“ focuses on accredited and certified courses and programmes.

Knowledge Management Provides Orientation:

Knowledge management has become necessary in the increasingly confusing field of education. The courses offered in „medicine & health“ are arranged in seven topical chapters and 53 subtopics. This categorisation is an efficient guide for readers looking for interesting and suitable courses.

¹ in the German-speaking region

„New Educational Gateway“²

As a service to organisers, GOING INTERNATIONAL offers an online database of current courses. In addition to the flagship courses in the print edition of „medicine & health“ organisers now have the possibility to publish further courses directly online. Useful websites and scientific publications are listed in two separate databases.
